AirPure
Innovations

Overview

- AirPure Innovations is a startup focused on tackling India's severe air quality crisis.
- This Project mainly focus on analysing the environmental and public health conditions across India to identify key demand triggers for air purifiers.

Severity Mapping

- This page mainly presents a visual representation of air quality severity across different regions.
- It categorizes areas based on AQI levels, indicating which regions fall into categories such as "Good", "Moderate", "Poor", "Veri Poor", etc.
- Maps or charts show distribution, highlighting regions that are most affected by pollution.

Health Impact Correlation

- This page Examines the relationship between air quality and health outcomes, particularly focusing on disease incidence rates.
- Data correlates AQI levels with reported health cases like respiratory diseases and other conditions linked to air pollution.
- This page include statistical analyses, charts or graphs showcasing trends over time.

Demand Triggers

- This page identifies the key factors driving the demand for improved air quality measures. It highlights the urgent need for effective air quality management in response to rising health issues linked to pollution.
- By showcasing critical metrics such as AQI trends, disease incidence, and pollutant distribution, the dashboard illustrates the strong correlation between environment condition and public health.

A scatter plot showing the relationship between the number of parameters (x-axis) and the number of FLOPs (y-axis). The x-axis ranges from 0 to 200K, and the y-axis ranges from 0K to 30K. The plot shows a general trend where FLOPs increase with the number of parameters, but with significant variance. A vertical line is drawn at approximately 70K parameters.

Legend: PM10 (Dark Blue), PM2.5 (Blue), O3 (Light Blue), PM2.5,PM10 (Light Blue)

Model Size	Category
111K	PM10
60K	PM2.5
16K	O3
13K	PM2.5,PM10
4K	PM2.5,PM10
1K	PM2.5,PM10

Bar chart showing the number of cases for various diseases across different water quality categories. The diseases are Acute Diarrhea, Acute Gastroenteritis, Chickenpox, Cholera, Dengue, Food Poisoning, and Hepatitis A. The water quality categories are Good, Moderate, Satisfactory, Poor, Very Poor, and Severe. The y-axis represents the number of cases, ranging from 0K to 80K.

Water Quality Category	Acute Diarrhea	Acute Gastroenteritis	Chickenpox	Cholera	Dengue	Food Poisoning	Hepatitis A
Good	72K	2K	5K	15K	10K	42K	10K
Moderate	72K	3K	5K	15K	10K	42K	10K
Satisfactory	72K	3K	5K	15K	10K	42K	10K
Poor	70K	3K	5K	15K	10K	42K	10K
Very Poor	65K	2K	4K	15K	8K	30K	5K
Severe	45K	1K	3K	10K	7K	22K	3K

This chart displays two data series over time from 2023 to 2025. The 'Total Cases' series is represented by a dark blue area, showing a high and relatively stable volume of cases, mostly between 170K and 190K. The 'Avg AQI' series is shown as a yellow line, which exhibits significant seasonal fluctuations, ranging from approximately 40K to 180K. The AQI peaks typically occur in the middle of each year, while the lowest values are seen in the late autumn or early winter months.

Month	Total Vehical Count (M)	Avg AQI
November	8.5	105
December	8.0	105
January	6.5	105
February	6.2	105
March	6.0	105
April	5.8	105
May	5.6	105
June	5.4	105
July	5.3	105
August	5.2	105
September	5.1	100

Stacked bar chart showing the percentage of female, male, and total population for various Indian states and the All India average. The y-axis represents percentage from 0% to 100%. The legend indicates Female (blue), Male (yellow), and Total (dark grey).

Region	Female (%)	Male (%)	Total (%)
